## AIRCRAFT CLEANERS & DISINFECTANTS

### CALLA<sup>®</sup> 800 COMMERCIAL

#### *Product description:*

### HEAVY DUTY CLEANING AND DEGREASING COMPOUND FOR AIRCRAFT

---

#### SPECS:

- Mil-C-87936 Type I
  - MIL-PRF-87937 Type II
- 

#### APPLICATIONS:

##### ✓ Exterior Fuselage:

- Mix 1 part of **Calla<sup>®</sup> 800 Commercial** with 3 to 20 parts of water (Depending on soil amount)
- Apply the mixture by spray or mop and allow a few minutes for it to penetrate before mopping, brushing and rinsing thoroughly.
- For recovery of badly oxidized surfaces, the 1:3 mixture will provide excellent results under most conditions.
- Future washing with more diluted mixtures will maintain oxide free and shiny surfaces.

##### ✓ Exterior-Blast Areas:

- Mix 1 part of **Calla<sup>®</sup> 800 Commercial** with 5 parts of solvent if solvent is used.
- Agitate the mixture briefly with air to form emulsion
- Spray or mop the mixture over the entire area, allow a few minutes for it to penetrate, scrub the surfaces well, and rinse with water
- When the use of the solvent is restricted, apply **Calla<sup>®</sup> 800 Commercial** at full strength and allow 20 to 30 minutes of dwell time
- Areas with heavy grease build up should be sprayed with **Calla<sup>®</sup> 800 Commercial** undiluted and then scrubbed with a brush

## AIRCRAFT CLEANERS & DISINFECTANTS

### CALLA<sup>®</sup> 800 COMMERCIAL

*Product description:*

## HEAVY DUTY CLEANING AND DEGREASING COMPOUND FOR AIRCRAFT

### APPLICATIONS:

✓ **Exterior-Blast Areas:**

- Rinse with high pressure hot water with the nozzle as close to the surface as possible to take advantage of the additional agitation of water pressure

✓ **Landing Gear:**

- Mix 1 part of **Calla<sup>®</sup> 800 Commercial** with 2 parts water, apply the mixture by spray or mop, and allow a few minutes for it to penetrate before scrubbing heavy deposits
- Finally, flood rinse the mixture with water

✓ **Waste Treatment:**

- **Calla<sup>®</sup> 800 Commercial** is designed to release oils and greases from the soap
- The rate at which the oil separates from the soap solution can be accelerated by neutralizing the solution below a pH of 10. Separation can be accelerated through further dilution as well.
- Oils will separate from the solution and float to the top where they can be removed using a skimming wheel or other standard separators
